

# RQ058328: Part 5 | Option to annotate a screenshot in the app

## Details

Priority: Medium Assigned to: Parvu, Lucian (ParvLu)  
Status: In progress Sprint: Capture  
QA Assignee::

## Description

As a user, I want to be able to annotaty a taken screenshot in the capture ticket, so that I can provide tailor the picture to my needs.

**Figma:** <https://www.figma.com/file/PgdXj6oQg8d5YlfW0gUBR4/aqua-capture?type=design&node-id=424%3A15962&mode=design&t=HrUPtr58W02gBLcb-1>

**Hyper theme:** <https://codethemes.com/hyper/saas/ui-modals.htm>

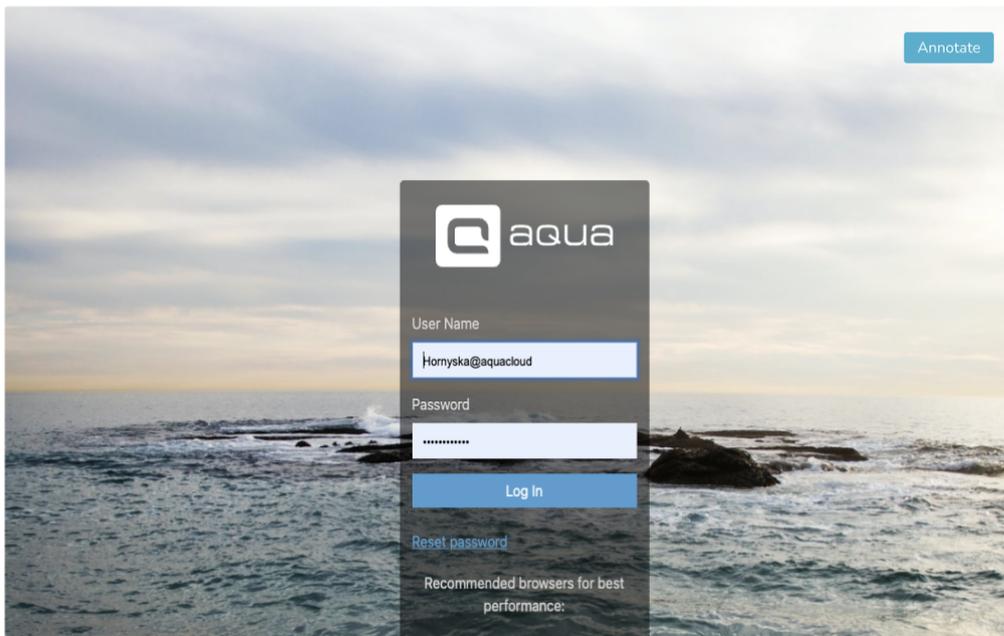

### Accptance criteria:

On a hover on a screenshot, there is an 'Annotate' button.

My expenses app > CP012345

The login page has a wrong aqua logo and the button color is incorrect

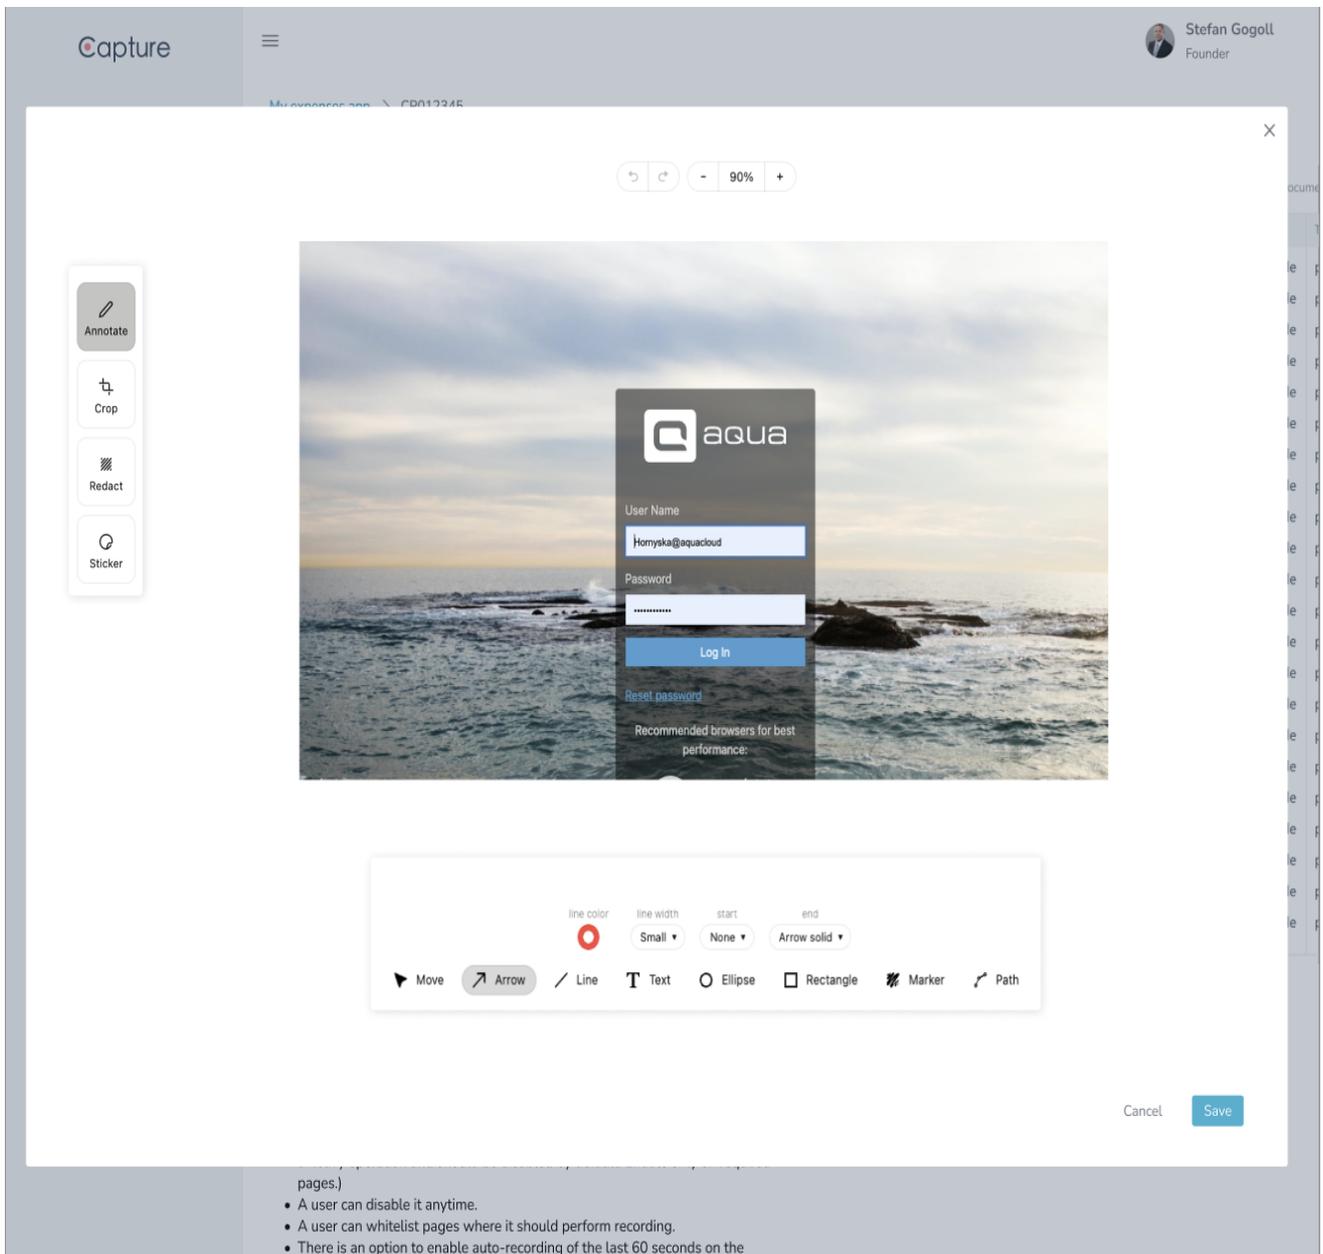

Share

When a user clicks on the button, the pop-up window opens with the annotation toolbar. (Note: we need to check if we can use a different one from what we use right now.)

A user can save changes to the screenshot by clicking the 'Save' button.

- If a user clicks 'Cancel' or closes the modal without saving the changes, then no modifications are applied to the ticket.

**NOTE for QA: editor on design has an illustrative purpose; we currently use a bit different one**

the options on the design above are just illustration

just random found options:
